Senior Software Engineer (Scala)

Ocado Technology, Hatfield, United Kingdom

Industry: Online grocery retail

Position type: permanent

I work on low latency services (<10ms) that informs shoppers what is in and out of stock.

Services are designed to be highly available and scalable (akka cluster, AWS, blue-green deployment), highly responsive (actor model) and low latency (in-memory cache with akka sharding).

Services are based on CQRS and event sourcing.

Achievements:

Introduced idea of team goal which helped us prioritize tasks and have common vision of our services.

Proposed adjustments to our sprint (pair programming, one story at a time) that improved collaboration and helped building trust.

Created two OAuth2 libraries (non-blocking client with caching capabilities and testing library) that are widely used across teams at Ocado Technology.

Configured Continuous Delivery pipelines. Did a research on implementation of BlueGreen Deployment and found major flaws in the early stage what allowed us to prepare architecture of our applications before it's released to production.

Migrated production and integration tests environments to new AWS account before given deadline.

Technologies: Scala, Akka, Spray, AWS, Git, Event Sourcing, Microservices, Distributed systems, JSON, REST, Swagger, ScalaTest, JIRA, Guice, DynamoDB, OAuth2, Crucible, Kibana, Logstash, GO, IntelliJ IDEA, Maven,

Senior Software Engineer (Java)

Ocado Technology, Hatfield, United Kingdom

Industry: Online grocery retail

Position type: permanent

I worked on the order management service.

Service was part of distributed platform based on cloud computing environment.

Achievements:

Introduced testing standards in the team.

ŁUKASZ KUSEK

profile

Contractor Software Engineer with 6 years commercial experience (9 years including part-time jobs). My area of expertise is building highly available backend services on JVM platform (Scala - 1 year, Java - 5 years).

Senior Software Developer (Java) - contractor

Luxoft, Krakow, Poland

Industry: Investment banking

Position type: contract via vendor

Contractor at UBS Investment Bank.

I worked on front office applications (capital commitment, automatic indication of interest generation and trade advertising) supporting sales traders and market makers at Cash Equities project.

Applications were event driven, based on FIX protocol and low latency (<5ms).

Achievements:

Reverse engineered trade advertising and automatic indication of interest generation and made a presentation for business users.

Implemented a proper handling of introduced algos within Sales Facilitation applications.

Introduced automatic system tests increasing quality of produced software.

Enhanced logging by adding single request tracking which significantly decreased the investigation time in case of an issue.

Set up automatic build system which improved speed and reliability of the release process.

Senior Java Developer Senior Java Developer - contractor Java Developer - contractor

Sabre, Krakow, Poland

Industry: Airlines and airports

Position type: contract / permanent

I worked on a cost saving migration project which involved over 30 major airlines.

The project was very challenging due to multiple dependencies (Sabre's internal systems, customer's systems), no downtime requirement, big amount of user data (data of 30M+ passengers of airlines), pressure of time, little documentation of the legacy system and all of it's features.

Service was part of distributed platform built using SOA and SOAP web services.

recommendations

"I have had the great fortune to work alongside Lukasz over the past year. He is a dedicated, cool-headed developer and a strong supportive leader of those around him. He has excelled in building and maintaining a strong, resilient and reliable series of applications operating together in near real-time. It is a huge loss for our organisation to see Lukasz leave - but know that he has left a lasting legacy in not just the software he has developed but in those whom he has supported in building their own experience."

Daniel Stoner, June 22, 2016

"Working with Lukasz is a real pleasure. Extreme attention to details, always willing to help others, very fast at providing reliable development results. His technical knowledge is very good, allowing to propose the best solutions for solving problems. He's one of the best developers I've met."

Szymon Paluchowski, April 7, 2013

"Lukasz has proven to be one of the most valuable team members, with his wide technical knowledge, willingness to learn and - especially - unbelievable attention to details. Lukasz always aimed for the complete, perfect solution to a problem - half-measures never satisfied him. I would gladly work with him again."

Maciej Hamiga, January 6, 2013

last updated

Achievements:

Finished the project 3 months before required deadline (license renewal of a proprietary mainframe).

Developed a XML comparison library using bipartite graph algorithm that significantly decreased number of discrepancies during the migration.

Created automated configuration diff tool reducing release time and increasing quality.

Lead best practices developers meetings which helped keeping common understanding of the system in a big team (30 developers).

Created a configuration API as an abstraction over a configuration source (file, DB, JMX) that allowed operations team to have flexible configuration.

Created searchable log application for QAs which allowed testing untestable before aspects.

Linux administrator

ConSol* Consulting & Solutions Software

Poland, Krakow, Poland

Industry: CRM

Position type: part-time

I've built and been maintaining infrastructure for a technology company which employed 30 developers.

Achievements:

Developed income optimizer for hospitals. Successfully deployed at the hospital in Sucha Beskidzka.

Researched and developed a 'proof of concept' application WebCTI - Asterisk / ConSol* CM in a single person R&D project.

Technologies: Linux, Bash, awk, Java, Apache Wicket, Spring, Hibernate, Maven, IntelliJ IDEA,
